

## Battery Storage is in Your Future

Mega battery factories are driving down the cost of storage just as mass production dramatically reduced solar panel prices. Combined with the rising cost of grid power and the phasing out of solar incentives, you don't need a fortune teller to tell you that battery storage will soon be an integral part of new solar generation systems. [Contact Cachelan](#) to provide an [NRGpilot portal](#) to manage these smart grid assets including net metering, time of use load shifting, standby battery / fossil generation for backup and EV charge control.
