

Houston - We Have a Problem

Houston Mission Control - The team interprets telematics data to find a way to get Apollo 13 back to earth

Solar generation systems with complex equipment requires comprehensive monitoring to operate properly, just like a spacecraft does. With SolarVu SMART Enterprise™ at mission control - aka Your Office - determine if all systems are go and pinpoint problems as they occur. Use SurePoint™ Analyzer tools running 24/7 diagnostics to dispatch O&M staff with the right spares in the truck to fix problems. Generate custom financial reports for investors from the lifetime data stored in the SolarVu database. Ensure your solar assets are producing at 100% all the time to maximize the ROI on a portfolio.

The new SurePoint™ portfolio view allows up to 12 panels per screen from different sites to be viewed at one time. This customer control room is using 6 HDTVs to monitor 54 sites in their portfolio showing output of all inverters.

Use SolarVu SurePoint™ Analyzer tools for solar generation asset management.
